

### **AMENDMENTS TO THE CLAIMS**

This Listing of Claims will replace all prior versions, and listing, of claims to the subject Patent Application.

#### **LISTING OF CLAIMS:**

1. (Currently Amended) A scanner, comprising:

a LED lamp set which includes at least one LED lamp to serve as a light source, the LED lamp set being disposed within a cavity defined by a supporting structure, the supporting structure including a plurality of walls projecting about opposing sides of said LED lamp set to bound an optical path between said LED lamp set and a transparent plate;

a the transparent plate having one side corresponding to the LED lamp set and other side corresponding to an object to be scanned, light emitted from the LED lamp set passing through the transparent plate to project onto the scanning object;

a reflection mirror set which includes at least one reflection mirror for receiving a light reflecting from the object to be scanned, where the light is emitted from the LED lamp set, and which reflects and focuses the light; and

an image sensor for receiving the light reflected from the reflection mirror set and transforming received optical signals to analog signals for outputting.

2. (Original) The scanner of claim 1, wherein the image sensor comprises a charge-coupled device.

3. (Original) The scanner of claim 1 further having at least one rod lens close to the LED lamp set at a desired location to refract and focus the light emitted from the LED lamp set.

4. (Withdrawn) The scanner of claim 1 further having at least one reflection surface close to the LED lamp set at a desired location to reflect and focus the light scattered from the LED lamp set.

5. (Withdrawn) The scanner of claim 1 further having at least one BEF (brightness enhancement film) close to the LED lamp set at a desired location to focus the light emitted from the LED lamp set.

6. (Withdrawn) The scanner of claim 1 further having at least one diffuser close to the LED lamp set at a desired location to focus the light emitted from the LED lamp set.

7. (New) The scanner of claim 3, wherein said rod lens is disposed between said supporting structure walls bounding said optical path of said LED lamp set to enclose said cavity of said supporting structure.

8. (New) The scanner of claim 7, wherein said rod lens is elliptical in sectional contour.
